- **Source Control/Repositories:** Git, Bit-bucket, GitLab
- **Server:** XAMP, WAMP, Apache, Laragon, mysql server
- **Project Management:** Jira from Atlassian
- **Testing:** PHPUnit, BDD, TDD
- **Continuous Integration & Deployment:** semaphore CI, Bitbucket Webhooks, Github Webhooks.
- **Other:** JSON, XML

Employment History

Senior JS Developer and Team Lead (Vuejs) at **TileMountain, Islamabad**

June, 2020 – Present

This is a UK based company, where a team of developers are working remotely on the company product. Under this company I have worked on VueJS framework Vue Storefront, It's an ecommerce application which our company is using as a frontend for Magento 2, I have worked on various products of this company that are built on Vue Storefront application.

I am currently assigned as Team Lead, where while assigning my team tasks on JIRA and Clickup and helping them out with issues and problems with vuejs is also part of my daily routine.

I also did set up a continuous Integration and deployments (CI/CD) for the Company for automating the deployments and testing processes. Both for Magento and Vuestore.

Currently we are in process of migration to Vuestorefront2, that is based on Nuxt 3

Products :

- Bathroom Mountain <https://bathroommountain.co.uk/>
- Tiles247 <https://tiles247.co.uk/>
- Tile Mountain <https://www.tilemountain.co.uk/>
- Walls and Floors <https://ww2.wallsandfloors.co.uk/>

Background on Products:

The above products mentioned are based on vuestorefront 1.x, that is Vue 2. On the backend it's connected to magento2. Vuestorefront 1.x utilizes the elasticsearch to improve its performance, where all products are indexed in elasticsearch and frontend does not need to query magento everytime. This approach not only improved user experience but also contributed to a more scalable and maintainable system architecture.

Senior Software Engineer (PHP) at **Creativetech Solutions, Islamabad**

May, 2016 – May, 2020t

Under this company i developed and worked in PHP frameworks (Codeigniter 3 and Laravel 5.4 / 5.5), Thou also did worked in different CMS such as created plugins in joomla, moved a ning site to jomsocial with huge amount of data from ning to jomsocial with custom made scripts by me. Worked in third party API's such as mongodb, github, bitbucket, facebook etc also being responsible for keeping servers working, had implemented the continuous integration and continuous deployment. I worked in an agile environment using the JIRA application, and our continuous deployment is handled by the semaphore and the application I worked on was on a live amazon aws ec2-elasticbeanstalk server.

Projects :

- **Esic Directory (Codeigniter 3.0)** <https://esic.directory/>

Developed a CMS in Codeigniter 3.0,

It's one of its kind as there are alot of features built on its back end.

Some of the common features.

- Page Builder (All Front end Pages have been built using that page builder).
 - Listings of Investors/Companies are being managed on the backend.
 - User/Role Management
 - FAQ's are being managed.
 - Questionnaires are being managed for Users (year wise), which are being asked on users during registrations.
- and much more.

– **Esic Directory (Weebly) <http://esic.directory/>**

This site was not fully designed/developed by me. As weebly does not support PHP, and client wanted to have dynamic pages, so I developed another application for our client and a script in javascript placed in weebly pages. That script created an ajax call to our application (developed in Codeigniter), and in return it gets dynamic pages which are being served on Weebly Site (esic.directory).

– **Billfolda (Started on Laravel 5.4, Upgraded to 5.5) <https://billfolda.com/>**

Product is still under process, This product is being developed under an Australian client with 8 members of the team, in which the team is developing platform where different investors can take part in crowdfunding, placing their investments on offers (Ideas/Programs) and buying shares for it.

– **Hairlista Inc (Ning to JomSocial)**

<http://www.hairliciousinc.com/>

<http://hairlista.com>

Hairlista Site was Previously hosted by ning (<https://www.ning.com/>) and was the product of ning.

The client wanted to develop this project from scratch in joomla (jomsocial), but also wanted to move all the data to jomsocial from the previous platform.

So Hairlista Inc was again Design and Developed by me and my team members from scratch, but before that i had to setup the grounds of development, setup the application and move all the data from the ning servers to our jomsocial application.

For this i had to download the JSON files and Media files from the NING server, as ning service does not provide access to its database, only provides JSON files and media files as a backup so i had to work for it. Decoded the JSON files (a single file was in Giga Bytes), and created a script in PHP to import the data and as well as the Media files (Images and Videos).

Was a huge task and was carried out smoothly by me. :)

However later minor designing tasks were being given to Jr Developers to carry on, so I could move to other priority projects.

– **Madcore Social**

A Jomsocial Site,

Developed a Plugin to social login from Github/Bitbucket and After getting Logged In their Public Repositories are being shown on their Profile Page, Where User can change to what Repositories needed to be shown on the Page, and What should be kept private for their own eyes.

Senior Software Engineer (PHP) at **Parexons, Peshawar**

Dec, 2014– May, 2016.

I joined this company as a Senior PHP Developer, and with time I got to the position of Team Lead, where I have worked on a variety of projects from small websites to big products, some of them I have mentioned below. Most projects/Products i have worked under this company were developed under the Codeigniter framework with mysql database on backend. But i was not only limited to these

frameworks and worked on wordpress, even worked once on a small issue of C# .NET, so it was challenging working in an environment where I had to deal with project varieties.

Another role as a team lead I had to work with the interneers and other junior developers, had to lead them and utilize their efficiency in a manner that they could be productive for the company, by dividing the existing project workload and assigning tasks to team members depending on their capabilities.

Projects :

– **PRaHMIS (Codeigniter 3.x)**

<http://prahmis.com/>

<https://codecanyon.net/item/phims/14974225>

PHIMS is old version, now new forked version is named as PRaHMIS (**Patient Record & Hospital Management Information System**), has more modules and better look and feel.

Worked as a Team Lead, and Operational Manager. This projects started under my supervision with name of PHIMS and did grow with time.

– **Human Resource Management System (Codeigniter 2.x)**

Worked as a Senior PHP Developer and a Team Lead, thou this project had already been started when I joined in, and took this project to new standards by replacing old and adding new quality code for efficiency, and developed some more modules for this product.

– **Stytech (Wordpress)**

<http://stytech.net/>

A Site developed in wordpress.

– **Explorer**

<http://explorer-sa.com/>

A site developed in wordpress

Senior Software Engineer and Designing Team Lead (PHPI) at
Smart Bakhtar Solutions, Peshawar

Jan, 2013 – Sep 2014.

Started Career in this company as a Senior Web Designer, and with time i got enrolled in PHP projects with small PHP scripts, as i had a PHP background knowledge so utilizing that and working hard expanded my boundaries to work on different JS libraries such as “Kendo.js”, “data-tables (with server side processing)” alongside a new framework “codeigniter” in this company, and went on developing different applications. with time passing by and my full attention and hardship, explored new areas using PHP and earned myself a badge for senior PHP developer, and with that i had two different roles of “Designing Team Lead”, “Senior PHP Developer”

Following Projects i have worked under this company.

Projects as a Web Designer Team Lead:

- Baran Hotel <http://baranhotel.com/>
- Khana-e-Noor <http://ken.edu.af/>

- Bost University <http://bost.edu.af/>
- Afghan Folad <https://afghanfolad.com/>
- Smart Bakhtar(Company) <https://smartbakhtar.com/> (Redesigned their site)
- Khana-e-Noor (MIS) <http://safijustonline.com/Authorization/Login.aspx> (Demo site, not an actual one)

Projects as a Senior PHP Developer:

- Zorkif ERP (Codeigniter 2.x)
ERP for Saudi Company, started as a PHP developer and with time got to the rank of Senior PHP Developer with 4 different team members, handling different modules, the requirements and the flows all were designed and provided to the team by the client itself, as client himself was a developer from Saudi Arabia.

Internship & Web Designer at **Telic Technologies**

May, 2012 – December, 2012.

Worked on different designs, Tools i had mostly used here Photoshop and Dreamweaver, it was the start of my career. and technologies i have worked with HTML/CSS/bootstrap, created designs for variety of websites, designed brochures, catalogues, PSD layouts for websites

During this time I was also working as a designer for a small project of .NET web application where it was hosted on a local server with continuous integration TFS(Team Foundation Server).

Making the website User friendly and Mobile Friendly with bootstrap, and some tweakings.

Education

- **BS-SE (Bachelors in Software Engineering) (2012)**
City University of Science and Information Technology
CGPA: 2.92
